

◆解答◆

- ① (1) 23.3l (2) $4\frac{2}{7}$
 (3) 0.43m (4) 5900
 (5) 6
- ② (1) 90円
 (2) ① 80円 ② 110円
 (3) 40円 (4) 2個
- ③ (1) 100 (2) 18
- ④ (1) 40g (2) 60円

◆解説◆

- ② (1) $(350 - 170) \div 2 = 90$ (円)
 (2) ① $\text{㊦} \times 2 + \text{㊧} \times 1 = 270 \cdots \text{㊦}$
 $\text{㊦} \times 5 + \text{㊧} \times 2 = 620 \cdots \text{㊧}$
 $\text{㊦} \times 2$ より,
 $\text{㊦} \times 4 + \text{㊧} \times 2 = 270 \times 2 = 540$
 $\text{㊦} \times 1 = 620 - 540 = 80$ (円) …パン
 ② $270 - 80 \times 2 = 110$ (円) …牛にゅう
 (3) 200円はえんぴつ(3+2=)5本の代金です。
 $200 \div 5 = 40$ (円)
 (4) 天びんの左右から○と△を1個ずつ取ると、○2個と□1個がつり合うことがわかります。
- ③ (1) $53 + 82 + 65 = 200$
 …AとBとCの和の2倍
 $200 \div 2 = 100$
 (2) $100 - 82 = 18$
- ④ (1) $\text{㊦} \times 2 + \text{㊧} \times 3 = 170 \cdots \text{㊦}$
 $\text{㊦} \times 3 + \text{㊧} \times 5 = 275 \cdots \text{㊧}$
 $\text{㊦} \times 3$ $\text{㊦} \times 6 + \text{㊧} \times 9 = 170 \times 3 = 510$
 $\text{㊦} \times 2$ $\text{㊦} \times 6 + \text{㊧} \times 10 = 275 \times 2 = 550$
 $\text{㊧} \times 1 = 550 - 510 = 40$ (g)
 (2) $\text{㊨} \times 4 + \text{㊩} \times 5 = 790 \cdots \text{㊨}$
 $\text{㊩} \times 3 = \text{㊨} \times 5 + 30 \cdots \text{㊩}$
 $\text{㊨} \times 3$ $\text{㊨} \times 12 + \text{㊩} \times 15$
 $= 790 \times 3 = 2370 \cdots \text{㊨}$
 $\text{㊩} \times 5$ $\text{㊩} \times 15 = \text{㊨} \times 25 + 150$
 ㊨の $\text{㊩} \times 15$ を $\text{㊨} \times 25 + 150$ と置きかえて,
 $\text{㊨} \times 12 + \text{㊨} \times 25 + 150 = 2370$
 $\text{㊨} \times 37 = 2370 - 150 = 2220$
 $\text{㊨} = 2220 \div 37 = 60$ (円)
